Institut de Recherche en
Cancérologie de Montpellier

Call for proposals 2015:
New research team
& group leader

The Laboratoire d'Excellence (LabEx) MABiImprove (<http://mabimprove.univ-tours.fr/>) is proud to launch its first call for proposals to welcome a new research team or group leader. This call is a partnership with the Institut de Recherche en Cancérologie de Montpellier (IRCM, www.ircm.fr) and will be devoted to therapeutic antibodies against cancer only. **Both junior and senior group leader proposals will be considered.**

The **MABiImprove initial support package will provide the laureate with up to 600 k€** including a 3-years group leader salary (in case of laureate without permanent position), a 3-years post-doctoral fellow salary, a PhD student and starting grant.

MABiImprove is a 2-sites "Laboratoire d'excellence" (LabEx) dedicated to therapeutic antibodies (<http://mabimprove.univ-tours.fr/>). It was launched in 2011 with a program based on the clinical use of antibodies and which can be summarized in a few words "improved antibodies, improved development and improved use". MABiImprove is organized according to 4 key questions mixing experimental as well as clinical ones. Based on a partnership between the Universities of Tours and Montpellier, associated with INSERM, the CNRS, the INRA, the University Hospital of Tours and the Comprehensive Cancer Hospital of Montpellier (ICM), MABiImprove LabEx federates 19 research teams and more than 200 researchers. It is based on the complementarity of both sites, as well as on a national network of academic teams involved in the project and numerous pharmaceutical and biotechnology companies directly affected by fallout from the project.

IRCM is presently composed of 16 research teams organized in two main programs: (i) therapeutic antibodies to target cancer: innovation, design & biological response; (ii) phenotypic, genetic, epigenetic and signaling plasticity of solid tumors: from discovery to personalized medicine.

IRCM is located on the campus of the Comprehensive Cancer Hospital of Montpellier (ICM, www.icm.unicancer.fr) renowned for its clinical

excellence in preventing, diagnosing and treating solid tumors. IRCM is funded by Inserm, ICM, and the University of Montpellier (www.umontpellier.fr) which includes the Faculty of Medicine. It is part of the strong and rapidly growing Montpellier research and medical communities that provide an exciting, supportive and collaborative environment recently labeled as one of the 8 French Integrated Research Sites in Oncology (SIRIC; <http://montpellier-cancer.com/>).

This call is dedicated to therapeutic antibody-oriented proposals that must fit with both MABiImprove's scientific program and IRCM's therapeutic antibodies program. Candidates without permanent position must meet criteria to compete for national and international research funding, and for French institutional positions (INSERM, CNRS, University).

Please send by email your CV, publication list and a short description (2 pages) of research accomplishments and future plans to hervé.watier@univ-tours.fr, andre.pelegrin@inserm.fr & claudio.sardet@inserm.fr at your earliest convenience. **There is no deadline. Applications will be analyzed as soon as they are received.** Please also arrange for two letters of reference to be sent separately by email before the deadline. Prof. Hervé Watier and Dr. André Pèlerin who manage this call will be pleased to answer any question.
